This page is outdated.

The content on this page is not up to date with the most recent game update. If you do wish to contribute, please request wiki edit access on the [Discord](#).

Game worlds can be customized to a great extent. In single player this is done simply through the "Customize" button when creating a new world. If you however changed your mind or updated to a new version, many of these configurations can be changed for existing worlds. The world configurations can also be set before a world is created through the [serverconfig.json](#) file.

Contents

General usage

- `/worldconfig name`

Show current configuration value
- `/worldconfig name value`

Set a configuration value
- `/worldconfigcreate datatype name value`

Creates a new configuration value. This is necessary when setting some configurations for the first time (datatype can be `float` `double` `int` `string` and `bool`)

Please note: Commands are **case-sensitive**. Type them exactly as you see, except for the `[]` shown in below command syntax, which is intended only to show which values can be changed! The pipe (`|`) symbol is there to seperate allowed values, e.g. `[true|false]` means you can set `true` or `false` here

Player spawn and death

- `/worldconfig deathPunishment [drop|keep]`

Whether to drop your inventory upon death (default: drop)
- `/worldconfig droppedItemsTimer [number]`

Sets the block gravity behavior for either just sand and gravel or additionally also soil (default: sandgravel)
- `/worldconfig spawnRadius [number]`

Sets how far players spawn in a radius from world spawn.
- `/worldconfig temporalGearRespawnUses [-1 .. 9999]`

The temporal gear allows you to set a spawn point. Here you can configure how often it can be used for respawning at the set point. -1 means infinite (default: 20)

The configs `startingClimate` and `graceTimer` can only be set during world creation.

Survival challenges

- `/worldconfig seasons [enabled|spring|summer|winter|fall]`

If enabled, seasons will pass over time, otherwise spring will make the climate always stay at spring (default: enabled)
- `/worldconfig playerLives [-1 .. 99]`

Sets the amount of lives a player has before he can no longer respawn. -1 means infinite. (default: infinite)
- `/worldconfig lungCapacity [number]`

Sets how long the player can hold their breath under water. (default: 40000, equivalent to 40 seconds)
- `/worldconfig daysPerMonth [1-99]`

Sets the number of days each month has. Setting it to a higher value will make seasons go by slower (default: 9)
- `/worldconfig harshWinters [true|false]`

If true, cold temperatures will damage crops, reduce animal spawn during winter and reduce meat harvested from animals (default: true)
- `/worldconfig blockGravity [sandgravel|sandgravelsoil]`

Sets the block gravity behavior for either just sand and gravel or additionally also soil (default: sandgravel)
- `/worldconfig caveIns [on|off]`

If on, solid rocks and cracked rocks now collapse if not **supported** while being broken/placed (default: off (except in Wilderness Survival))
- `/worldconfig allowUndergroundFarming [true|false]`

If true, plants can be grown deep underground, given enough sunlight. (default: false)
- `/worldconfig bodyTemperatureResistance [-40.. 40]`

Sets the temperature an undressed seraph can bear without starting to freeze
- `/worldconfig creatureHostility [aggressive|passive|off]`

Set default creature hostility (default: aggressive)
- `/worldconfig creatureStrength [0-99]`

Sets the creature damage multiplier; a value of `1` means 100%, `2` means 200%, and so on (default: 1).
- `/worldconfig playerHealthPoints [1-999]`

Sets the player's base health points. Does not affect already joined players, use `/player` command for that. (default: 15)
- `/worldconfig playerHungerSpeed [0-10]`

Sets the player's hunger rate multiplier (default: 1)
- `/worldconfig playerMoveSpeed [0-10]`

Sets the player's move speed multiplier (default: 1.5)
- `/worldconfig foodSpoilSpeed [0-10]`

Sets the spoilage rate multiplier of all perishable foods, e.g. 0.5 means all food lasts twice as long (default: 1)
- `/worldconfig saplingGrowthRate [0.1-20]`

Sets the sapling growth rate multiplier of all trees. (default: 1)
- `/worldconfig toolDurability [0-99]`

Sets the tool durability multiplier, e.g. 2 means all tools have double durability. (default: 1)
- `/worldconfig toolMiningSpeed [0-99]`

Sets the tool mining speed multiplier, e.g. 2 means all tools break their respective blocks twice as fast. (default: 1)
- `/worldconfig propickNodeSearchRadius [0-12]`

If above zero, a second prospecting mode will be enabled that allows for exact searches at the defined radius (default: 6)
- `/worldconfig globalDepositSpawnRate [0.1 - 5]`

Sets a rate for all (other than surface deposits) ores and mineral deposits; a value of `1` means 100%, `2` means 200%, and so on (default: 1)
- `/worldconfig microblockChiseling [off|stonewood|all]`

Whether to allow microblock chiseling. 'Stonewood' means all stone and wood materials are allowed. 'all' means most cubic blocks are allowed. (default: Stonewood)
- `/worldconfig loreContent [true|false]`

Whether the story-related lore content is included in world generation (default: true)
- `/worldconfig clutterObtainable [ifrepaired|yes|no]`

Whether the clutter items in ruins can be repaired with glue to obtain them (ifrepaired), or if they can be obtained without glue (yes), or if they cannot be obtained at all (no); (default: ifrepaired)
- `/worldconfig noliquidSourceTransport [true|false]`

If `true`, buckets can only transport water realistically, not create new sources (default: false)
- `/worldconfig creaturesSwimSpeed [0.5 - 3]`

As a multiplier, a value of `1` means 100%, `2` means 200%, and so on. (default: 2)
- `/worldconfig playerHealthRegenSpeed [0.25 - 2]`

Description (default: 1)
- `/worldconfig lightningFires [true|false]`

If `true`, lightning can cause wildfires in dry conditions (default: false).

World map

- `/worldconfig allowCoordinateHud [true|false]`

Whether players are allowed to use the coordinate HUD. (default: true)
- `/worldconfig allowMap [true|false]`

Whether players are allowed to use the world map. (default: true)

All of the following work^[1] in a singleplayer world to restore the parchment-style map to the classic colorful map:

- `/worldconfig colorAccurateWorldmap true` (default: false)
- `/worldconfigcreate bool colorAccurateWorldmap true`
- `/player [playername] privilege grant colorAccurateWorldmap`

In a multiplayer world, the following restores the classic map for an individual:

- `/player [playername] privilege grant colorAccurateWorldmap`

while the following restores the classic map for all players:

- `/worldconfig colorAccurateWorldmap true`
- `/worldconfigcreate bool colorAccurateWorldmap true`

(needs confirmation)

Temporal stability

- `/worldconfig temporalStorms [off|veryrare|rare|sometimes|often|veryoften]`

How frequent temporal storms should be (default: sometimes)
- `/worldconfig tempstormDurationMul [value]`

Command to change the duration of temporal storms. As a multiplier, a value of `1` means 100%, `2` means 200%, and so on.
- `/worldconfig temporalStability [false|true]`

Whether the temporal stability mechanic should apply (default: true)
- `/worldconfig temporalRifts [off|invisible|visible]`

Defines temporal rift behavior (default: visible)
Off: No rifts spawn, which also means no drifters can spawn on the surface.
Invisible: Rifts are not visible to the player, make no sound and do not affect players in any way, but do spawn drifters.
Visible: Rifts are visible to the player, make sound, drain stability on nearby players and spawn drifters.
- `/worldconfig temporalGearRespawnUses [-1 .. 9999]`

How many times you can respawn from a spawnpoint set by the temporal gear. -1 means infinite. (default: 20)
- `/worldconfig temporalStormSleeping [0|1]`

Whether or not to allow sleeping during temporal storms (default: 0)

World generation

The configs *world climate*, *world size* and *polar-equator distance* can only be set during world creation.

- `/worldconfig worldClimate [realistic|patchy]`

Sets the climate of the world (default: realistic). Available only during world create stage.
- `/worldconfig landcover [0.1-1]`

Sets the amount of the world that will be covered in land (default: 1)* Available only during world create stage.
- `/worldconfig oceanscale [0.1-4]` (labeled in game's world customization menu as 'Landcover scale.')

Sets the amount of the world that will be covered in ocean (default: 1)* Available only during world create stage.

Affects hot springs and lava.

- `/worldconfig landformScale [0.5-1.5]`

Sets the percentage variation of various landforms, making them larger or smaller during generation (default: 1.0)* Available only during world create stage.
- `/worldconfig worldEdge [blocked|traversable]`

Whether you can fall off the world edge (default: traversable)
- `/worldconfig storyStructuresDistScaling [0.15-3]`

Affects how far apart the story event locations generate. A value of 2 is twice as far as default, while 0.5 is half as far as default.
- `/worldconfig globalTemperature [0-5]`

Sets the global temperature multiplier for world generation. Does not affect already generated chunks. Useful values are between 0.1 and 5, where 0.1 is super cold, and 5 is super hot. (default: 1)
- `/worldconfig globalPrecipitation [0-5]`

Sets the global rainfall multiplier for world generation. Does not affect already generated chunks. Useful values are between 0.1 and 5, where 0.1 is super dry and 5 is super wet (default: 1)
- `/worldconfig globalForestation [-1 .. 1]`

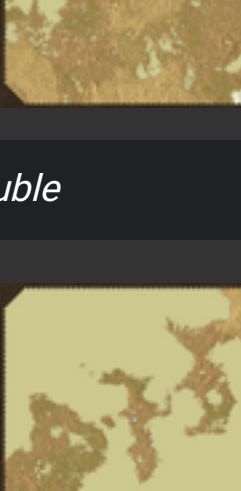

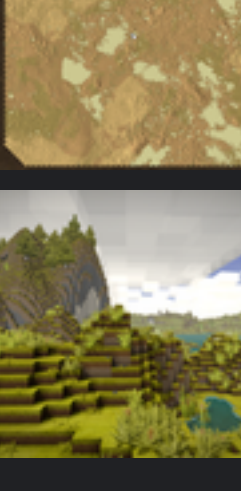

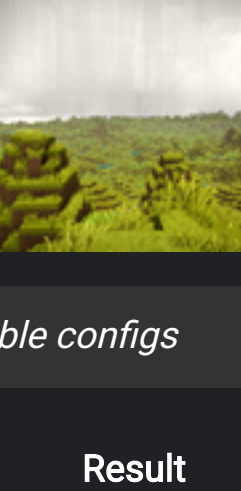

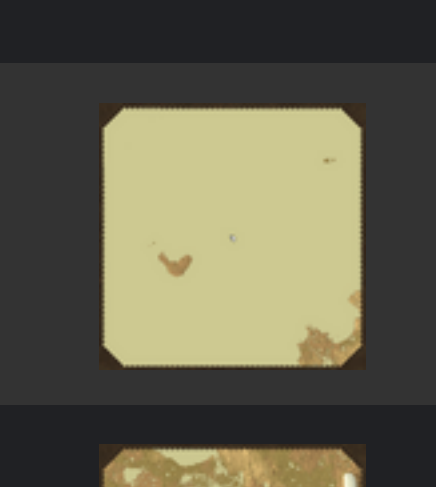

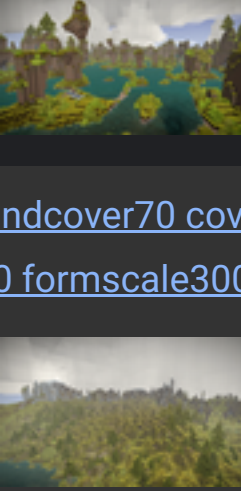

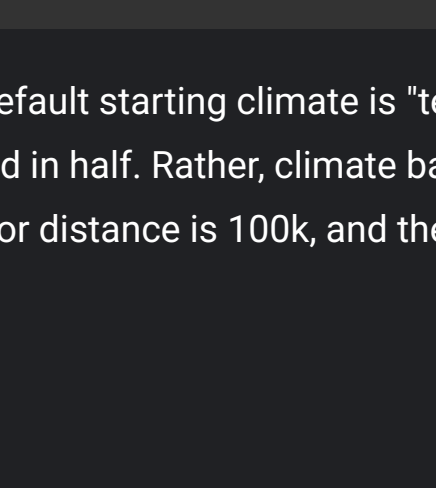

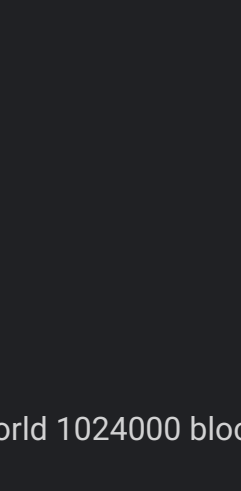

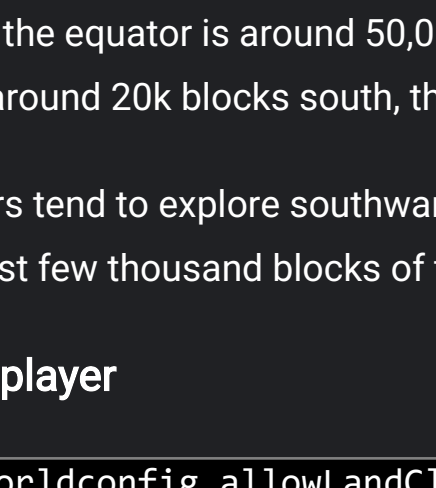

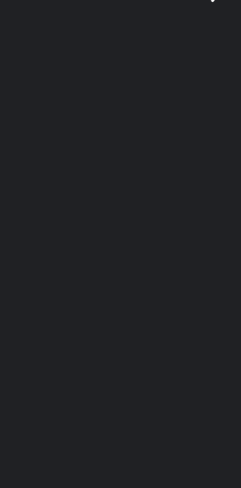

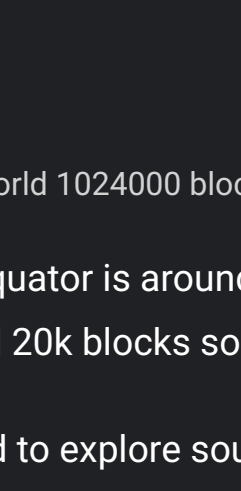

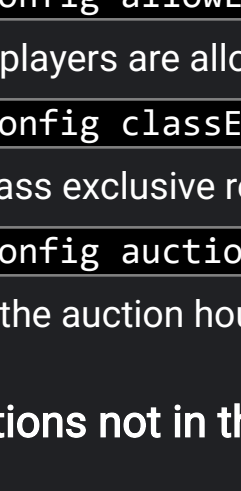

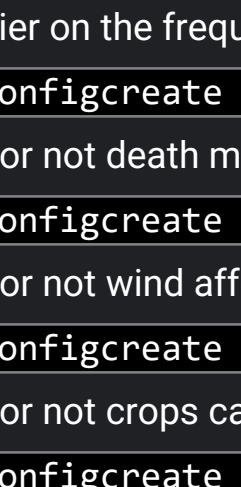

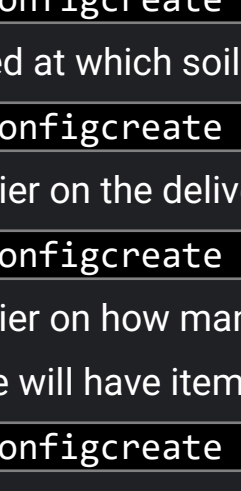

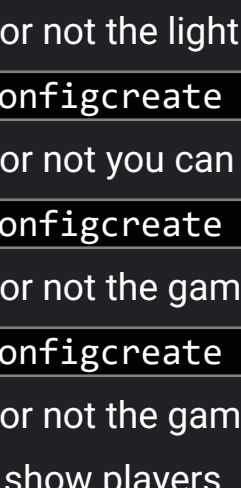

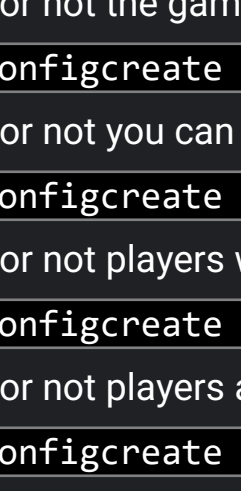

Sets the global forestation offset for world generation. -1 means there will be no forests, 1 means there will be only forests, the value 0 means default forestation density (default: 0)
- `/worldconfig surfaceCopperDeposits [0-5]`

Sets the chance of surface copper spawning for each chunk column (default: 0.12^[2])
- `/worldconfig surfaceTinDeposits [0-5]`

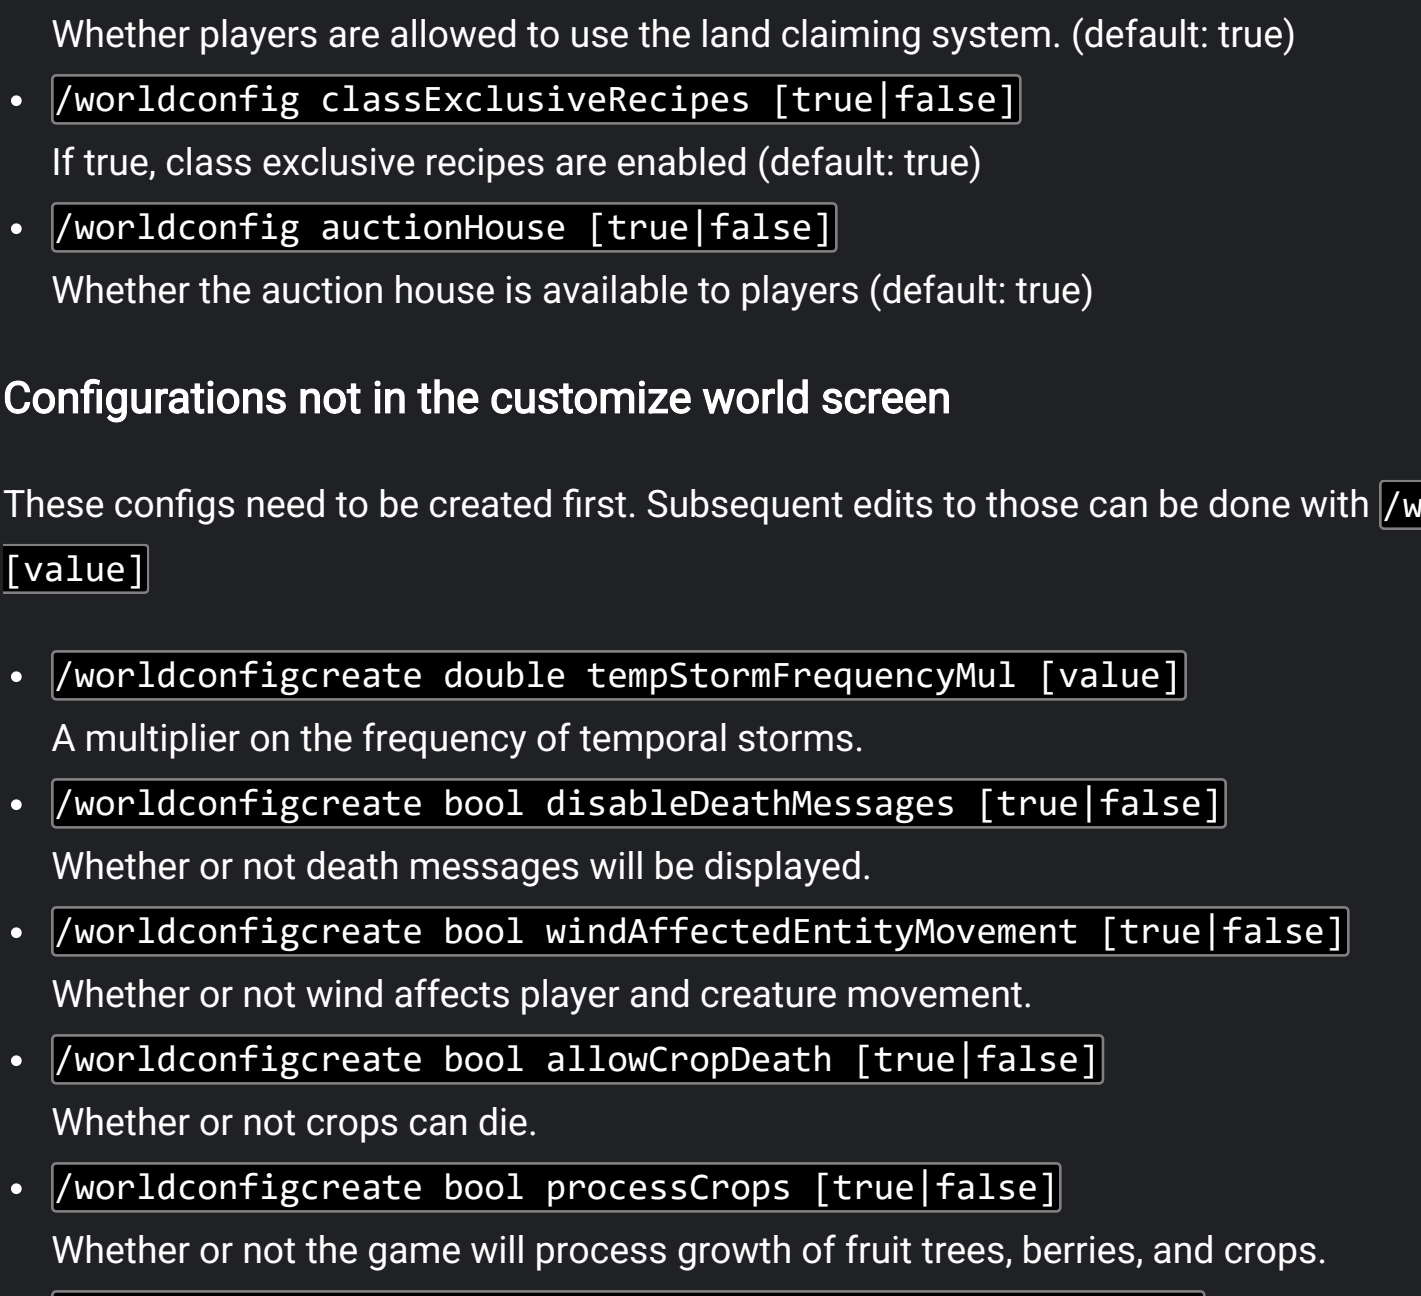

Sets the chance of surface tin spawning for each chunk column (default: 0.007^[3])
- `/worldconfig snowAccum [true|false]`

If true, snow will accumulate during winter (default: true)

* See the table below for the effects of changing these settings.

World seed 612031164 with various configurations Collapse					
Result	Landcover	Landcover scale	Upheaval rate	Landform scale	Characteristics
	default 100%	default 100%	default 30%	default 100%	Plentiful ponds and lakes
<i>Half vs double</i>					
	50%	default 100%	default 30%	default 100%	Half as much of the world with land.
	200%	default 100%	default 30%	default 100%	not available in Customize screen
	default 100%	50%	default 30%	default 100%	With landcover at 100%, ocean size appears unchanged.
	default 100%	200%	default 30%	default 100%	With landcover at 100%, ocean size appears unchanged.
 	default 100%	default 100%	10%	default 100%	More flat areas.
 	default 100%	default 100%	60%	default 100%	More raised areas.
 	default 100%	default 100%	default 30%	40%	Raised areas are skinny/spiky.
 	default 100%	default 100%	default 30%	200%	Raised areas are broad/blunt.
<i>Multi-variable configs</i>					
Result	Landcover	Landcover scale	Upheaval rate	Landform scale	Characteristics
	10%	default 100%	default 30%	default 100%	Barely any land.
	70%	default 100%	default 30%	default 100%	Significant seas/oceans.
	70%	10%	default 30%	default 100%	Significant quantities of water separating islands.
	70%	50%	default 30%	default 100%	Significant seas/oceans, separated by plenty of land.
	70%	200%	default 30%	default 100%	Nearly default: plenty of land between bodies of water.
File:Map [landcover70 coverscale50 formscale300.png] 	70%	50%	30%	300%	Frequent water rather than distinct landmasses.
File:Map [landcover70 coverscale50 upheaval50 formscale300.png] 	70%	50%	50%	300%	Rarely flat terrain at sealevel.

The default starting climate is "temperate" in the northern hemisphere. But the Vintage Story world is not a sphere and not divided in half. Rather, climate bands repeat until the world ends. With a Standard playstyle's default setting, the polar-equator distance is 100k, and the player would spawn roughly halfway between the equator and north pole.

in a default world 1024000 blocks by 1024000, there are 5 equators.

While the equator is around 50,000 blocks away, the player could reach different types of plants and animals sooner than that: around 20k blocks south, the player might encounter animals and plants that exclusively spawn in the south.

Players tend to explore southwards for milder climates; some players trek to the north pole. But they still usually stay within the first few thousand blocks of the spawn coordinates.

Multiplayer

- `/worldconfig allowLandClaiming [true|false]`

Whether players are allowed to use the land claiming system. (default: true)
- `/worldconfig classExclusiveRecipes [true|false]`

If true, class exclusive recipes are enabled (default: true)
- `/worldconfig auctionHouse [true|false]`

Whether the auction house is available to players (default: true)

Configurations not in the customize world screen

These configs need to be created first. Subsequent edits to those can be done with `/worldconfig [variable name] [value]`

- `/worldconfigcreate double tempStormFrequencyMul [value]`

A multiplier on the frequency of temporal storms.
- `/worldconfigcreate bool disableDeathMessages [true|false]`

Whether or not death messages will be displayed.
- `/worldconfigcreate bool windAffectedEntityMovement [true|false]`

Whether or not wind affects player and creature movement.
- `/worldconfigcreate bool allowCropDeath [true|false]`

Whether or not crops can die.
- `/worldconfigcreate bool processCrops [true|false]`

Whether or not the game will process growth of fruit trees, berries, and crops.
- `/worldconfigcreate double cropGrowthRateMul [0.1 ... 10]`

Sets the growth rate for crops and berry bushes.
- `/worldconfigcreate float fertilityRecoverySpeed [value]`

The speed at which soil recovers fertility. (default: 0.25)
- `/worldconfigcreate float auctionHouseDeliveryPriceMul [0..10]`

A multiplier on the delivery costs for purchased items in the auction house (default: 1)
- `/worldconfigcreate int auctionHouseDurationWeeksMul [1,2,3,4,...]`

A multiplier on how many weeks a auction can stay listed before expiring, does change the cost of listing (e.g. doubling this value will have items listed twice as long for the same cost). Can not use decimal numbers. (default: 1)
- `/worldconfigcreate float auctionHouseSalesCutRate [0..1]`

The sales cut the trader takes for a sold item on the auction. (default: 0.1, which is 10%)
- `/worldconfigcreate string undergroundWindmills [true|false]`

Whether or not the game will disable windmill spinning when sunlight level is below 5.
- `/worldconfigcreate bool lightningDamage [true|false]`

Whether or not the lightning does damage on strikes.
- `/worldconfigcreate bool legacywecommands [true|false]`

Whether or not you can use old world edit commands in addition to new ones.
- `/worldconfigcreate bool mapHideOtherPlayers [true|false]`

Whether or not the game will display other players on the map.
- `/worldconfigcreate bool entityMapLayer [true|false]`

Whether or not the game will display the entity map layer, showing all non-player entities on the map using the icons that normally show players.
- `/worldconfigcreate bool allowDeathwaypointing [true|false]`

Whether or not the game will display a death waypoint on the map when you die.
- `/worldconfigcreate string potatoeMode [true|false]`

Whether or not the game generates moss on trees.
- `/worldconfigcreate string allowOpenFireFiring [true|false]`

Whether or not you can fire raw clay items in an open fire instead of a pit kiln.
- `/worldconfigcreate bool player2PlayerCollisions [true|false]`

Whether or not players will have collision with each other.
- `/worldconfigcreate bool allowCreativeModeCommandBlocks [true|false]`

Whether or not players are allowed to edit command blocks in the world.
- `/worldconfigcreate bool openDoorsNotSolid [true|false]`

Setting this to true will make doors work like slabs where only one face counts as solid for building rooms.
